DETAILED ACTION

Claims 1-12 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 2 and 10-12, drawn to compound of formula I and a process for making.

Group II, claim(s) 3, 7 and 8, drawn to a another process of making a compound of formula I.

Group III, claim(s) 4, drawn to another process of making compound of formula I.

Group IV, claim(s) 5, drawn to another process of making compound of formula I.

Group V, claim(s) 6, drawn to a process of making an intermediate of formula II.

Group VI, claim(s) 9, drawn to yet another process of making an intermediate of formula II.

The inventions listed as Groups I, II, III, IV, V and VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The following apply.

Where there is lack of unity the requirement for restriction is proper- See MPEP

Art Unit: 1624

803.02. The requirement for unity of invention is two-fold: (1) common utility and (2) sharing a substantial structural feature disclosed as being essential to the utility. Both these conditions are to be met with. Instant claims do not meet both these conditions.

Invention I-IV and V-VI are independent and distinct from each other because they are directed to process of making structurally dissimilar compounds that lack common core, namely, a pyrimidino core versus benzene core compound. in a mutually exclusive species related as final product and intermediate. Thus, the intermediate does not share the common utility requirement and the substantial structure essential for utility and it is the process for the intermediate is embraced and has bearing on the use. Consequently, the groups require separate prior art searches. They can be made and used independently. Art which may render obvious or anticipate one of the groups would not necessarily do the same for the other group. For example prior art cited in the International Search Report and the Information Disclosure Statement may not be applicable to all the above groups. Each can support a patent as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

Invention I , II and III are also distinct and independent. Whereas the invention I relates to compound useful for HIV and its process, inventions I and III relate to various ways of making the same compound each of which is distinct from each other. A prior art which reads on any one of the process may not anticipate or render the other processes obvious . Each invention has to be examined separately.

In view of distinct nature of each of the invention, the restriction is set forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
